EDUCATION

Pampanga State University (formerly Don Honorio Ventura State University)

August 2025

Bachelor of Science in Computer Engineering | With Latin Honors: Cum Laude

GWA: 1.4331

Dean's List Honoree – First Year to Third Year

SKILLS

Hardware: Computer Assembly and Troubleshooting, PCB Design (KiCAD), Circuit Simulation (Proteus), Soldering, Fiber Optic Testing, Splicing, and Ethernet (RJ45) Termination & Testing

Software: Troubleshooting, HTML, CSS, Python, Video Editing (Adobe Premiere Pro)

EXPERIENCE

Self-Taught PC Builder & Troubleshooter

March 2019 – Present

Freelance / Personal Projects

- **Built and configured** custom desktop PCs tailored to performance and budget needs.
- **Diagnosed and fixed** hardware/software issues such as boot errors, overheating, and driver conflicts.

Computer Engineer Intern

Feb 2025 – May 2025

Pampanga High School (PRO-MIS Department) – San Fernando, Pampanga

- Enhanced skills in **troubleshooting both hardware and software issues**.
- Gained **hands-on experience** in network configuration and provided IT support to staff and faculty.
- Developed technical knowledge and strengthened **problem-solving abilities** in real-world settings.

PROJECTS

Dual-Controlled Robot for Fire Suppression Using Low-Frequency Sound Waves

- Develop and design the body of the robot using Autodesk Fusion 360.
- Designed a circuit, developed and soldered the components into the PCB.
- Develop the code / program using Python for the robot.
- Troubleshoot, Debug, and Optimize the code for the robot's performance testing / evaluation.

Python GUI DSP Application

- ADC Conversion – Plot a Sampling Frequency (1-1000 Hz).
- FIR Filter – Audio Filter (.wav) and Image Filter (.png, .jpg, .jpeg).
- Moving Average Filter – Select a CSV file then choose a Data Type to plot.
- High-Pass to Low-Pass Filter Conversion – Select an Audio File (.wav) then choose a Cutoff frequency that must be less than half the sampling rate (Nyquist frequency), lastly select the Order (1-10).

24 Volts Power Supply Unit

- Designed a circuit, developed and soldered the components into the PCB.
- Implemented a minimum of 12 Volts and maximum of 24 Volts.
- Added a rotary potentiometer to regulate the voltage to desired value that corresponds to the LED.

CM Private Rest House Website

- Created a website for a free to a business for a school project.
- Added pictures, amenities, location, and contact information about the resort.
- Added a backend reservation system for ease of use.

AJP Car Rental Website

- Created a website for a free to a business for a school project.
- Added pictures, location, and contact information about the car rental.
- Added a backend booking system for ease of use.

CERTIFICATION

- Google IT Support by Google on Coursera
